

HOW TO CREATE A COMFORTABLE OUTDOOR ENTERTAINING SPACE FOR FALL.

[July 19th, 2017] GARDENA, CA – Autumn is fast approaching and with it come cooler nights, stronger winds, and for many of us, a close to the outdoor living season. Fortunately, Infratech heaters can help your family enjoy the changing leaves and crisp air a little bit longer. Our eco-friendly infrared heaters operate for just pennies a day, offering sleek contemporary design that fits into every decor scheme, customizable climate zones, and heat that doesn't blow away when the wind picks up. Infratech heaters are the foundation of a comfortable, cozy outdoor space where your family and friends will love to spend time — but they're just the beginning. Whether you're making upgrades to your existing backyard space or are designing a whole new outdoor room, three essential elements can take your outdoor area from ordinary to extraordinary.

Here's what you'll need to create the alfresco dining area or backyard hangout spot of your dreams:

Conversation Starter

Want to take your outdoor area from blah to amazing? Add an extra wow factor to your living space by incorporating a pizza oven, fire pit, built-in beer cooler, or a distinctive decorative feature like a fountain, koi pond, or sculpture. Not only will you give your guests something to talk about, you'll take your entertaining abilities up a notch.

Warmth/Comfort

Infratech infrared heaters are the smart choice for a multitude of reasons. The heated quartz elements within our heaters emit a safe, clean wavelength of light that is absorbed only by solid objects; heat is transmitted exclusively to people and objects. Since we're not just heating the air, this means the warmth won't disappear when a heavy wind picks up. Our heaters are also easily integratable into smart home systems and since they emit no greenhouse gases and are more efficient than traditional gas heaters, choosing Infratech is a great way to go green and save some green.

Lighting

Now that you've found a solid heating solution and chillier fall evening temperatures aren't a problem, it's time to think about how you're going to light up the night. String lights can add a festive flair, or if you're working on an environmentally-friendly remodel, solar-powered lights are a natural pick. No matter what you choose, the important people in your life will be delighted at the opportunity to spend more time together, enjoying the changing seasons long after the sun goes down.

ABOUT INFRATECH

Infratech has been a pioneer and leader in infrared technology for more than 50 years.
